

## Appendix 1: Key elements of our financial statements audit approach

### Driving more value from the audit through data and analytics

Technology is embedded throughout our audit approach to deliver a high quality audit opinion. Use of Data and Analytics (D&A) to analyse large populations of transactions in order to identify key areas for our audit focus is just one element. We strive to deliver new quality insight into your operations that enhances our and your preparedness and improves your collective 'business intelligence.' Data and Analytics allows us to:

- Obtain greater understanding of your processes, to automatically extract control configurations and to obtain higher levels assurance.
- Focus manual procedures on key areas of risk and on transactional exceptions.
- Identify data patterns and the root cause of issues to increase forward-looking insight.

We anticipate using data and analytics in our work around key areas such as accounts payable and journals. We also expect to provide insights from our analysis of these tranches of data in our reporting to add further value from our audit.
