Gold Star Firefighter Escape plan

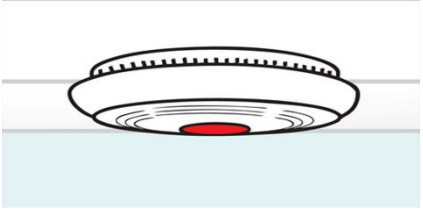

Task

1. Below are all the steps to follow when getting out of a building if it is on fire.
2. Cut out the stages.
3. On another piece of paper, put them in the correct order so that you end up safely out of the building and the firefighters arrive.
4. Then draw a picture next to each stage, to show what you would do.

Example

Step 1.

When the smoke detector starts to beep you need to get out the home.

Steps to cut out

When the smoke detector starts to beep you need to get out the home.	If there is smoke, crawl under it so you don't breathe it in.
If the door is shut, use the back of your hand to test it is cold, before you open it.	Keep the keys near the doors and windows so you can get out quickly.
Have a meeting point outside, safely away from the building e.g. a tree.	Go down the stairs carefully. They should be clear of anything you could trip over.
Call 999. Tell them the address (including the postcode) clearly so they know where to go.	Head to your nearest way out of the building (normally your usual exit).
