Fire training sites where AFFF has been used

Query and response:

I am requesting information about fire training sites where AFFF (aqueous film-forming foam) has been used.

What I need:

1. Fire training facility locations:

- *Address and postcode (or grid reference)*

We carry out training at the following locations:

- **Devizes Training Centre, Hopton Industrial Estate, London Road, Devizes, Wiltshire, SN10 2EU**
- **West Moors Training Centre, West Moors, Wimborne, Dorset, BH21 6QS**
- **Cotswold Airport (Kemble), Cirencester, Gloucestershire, GL7 6BA**

Please note that Cotswold Airport is not a DWFRS site and that live fire with foam training only takes place at West Moors Training Centre.

- *Years operational*

Devizes Training Centre opened in 1985 and West Moors Training Centre opened in 1996. This information is not held for Cotswold Airport.

2. AFFF foam usage:

- *AFFF products used (2015-2026)*

We predominantly used the following products, which were manufactured by Angus Fire Ltd:

- **Alcoseal**
- **FP70**
- **FP600**
- **FP570**
- **Niagara**

Some of the more modern versions of these foams, from approximately 2015 were manufactured without PFAS.

- *Date transitioned to fluorine-free foam (if applicable)*

Class B - 2022

- *Whether PFOS/PFOA-containing foam was used*

Yes

3. *Environmental monitoring (if conducted):*

- *Any soil or groundwater PFAS testing results*
- *Sample dates and locations*

We do not conduct and have not previously conducted environmental monitoring. We are not required to do such monitoring and have never had the capability to do this. We do all that we can to prevent releases into the water courses or storm drains and where this is unavoidable our requirement is to inform the Environment Agency.

Information accurate on the date provided: 11 March 2026
